

Multi-dimensional Scaling

Multivariate Solutions

Multidimensional scaling (MDS)

- Multidimensional scaling (MDS) graphically displays the proximity of brand attributes or attitudes.
- Survey Design
 - Potential customers are asked to compare pairs of products, rate them, or make judgments about their similarity.
 - The maps are calculated using various distance measurements.
- An MDS Map can help determine:
 - What products and services do customers tend to purchase together.
 - Which brands do they tend to lump into the same category.
 - Which attributes' importance or performance tend to be connected.

Multidimensional scaling (MDS)

- **Structure of the Questionnaire**
 - **Ratings for Single Brand**
 - Can be discrete scale (e.g. 1-to-7)
 - Check all that apply (percentages)
 - **Virtual Shopping**
 - Please check all items that you intend to purchase
 - **Input data can be:**
 - Ratings
 - Brand similarities
 - Groupings of various brands or types of products
 - Observation of which products potential customers tend to purchase together in a virtual store or mystery shopping scenario
